Conservation Tree Program

Nebraska's NRDs have helped landowners plant more than 101 million trees since their inception in 1972!

Generally, NRD conservation trees and shrubs come as bare root seedlings in bundles of 25.

Why plant trees?

- 1.** Windbreaks protect livestock from extreme temperatures, reducing stress and mortality.
- 2.** Riparian buffers enhance water quality while preventing erosion and sedimentation.
- 3.** Windbreaks boost crop yields and minimize soil erosion on agriculture fields.
- 4.** Trees and shrubs offer essential habitat, cover, and food for wildlife.
- 5.** Windbreaks shield homes and buildings from wind, lowering energy costs.

Contact your local NRD to order tree seedlings for spring planting.
